

UPGRADE INSTRUCTIONS:

Find the version after the one you already have installed. There is a list of files that were modified. Upload via FTP all the files modified to your /wpmanager on your host. If the setup.php file is listed, then run via your browser the setup.php and only enter the username/password of your wpmdx login and click Upgrade DB Only button.

=====

1.00 First release

1.01 Some more features

1.02 - 3.0 More new features and fixes

3.00

Support for WordPress 2.8

New design now supports full screen

New Images for new design /images

Edited the /Templates and /help files

Small Bug fixes for new edition

Set the default permalink to /%postname%/

Now you can see the database information in manage projects area

Re-arranged menu to the left for better navigation

Re-arranged the Edit Settings page for easy access

New easy way added for adding links and categories

New easy way to access all sections for Single and Multiple

New design for while Setup or Upgrading Database

Overall Stats added to main page i.e. Last Events, Total Plugins, Total Themes & for Manage Content

Repairing database moved from main page to Manage Database section

Search function moved from main page to List/Edit/Update Blogs & Search function updated

Ioncube Encryption added for ./include/*. * folder files

After you upload all files below, you need to run setup.php via and only enter your admin login and click Upgrade DB Only button.

./CHANGES.txt

./images/*. * - all files inside this folder

./include/*. * - all files inside this folder

./ioncube/*. * - all files inside this folder

./help/*. * - all files inside this folder

./Templates/*. * - all files inside this folder

./setup.php

3.01 - 3.02

Fixed some minor bugs when upgrading the wordpress script. It was replacing the .htaccess causing wpmdx

not to upgrade the script. Also fixed some things and redesigned some pages with the Manage Content (autoposter)

but you have to upload seperately since this module is in another zip archive included with wpmdx.

Also the WPMetaTagsDX.zip plugin has been updated as well. You will find it in the _optional zip archive inside the wp-plugins folder.

Files to upload to your host:

./CHANGES.txt

./include/*. * - all files inside this folder

3.03

Plugins section updated split into two options:

- Activate selected plugins only, not all plugins that are listed above will be activated. (If you are Updating blog then it will not replace the already activated plugins and only selected will be uploaded and activated).

- Activate selected plugins only but Delete other installed/activated plugins in your blog. (If you had plugins in your blog that are the same as the ones you selected above then they will be replaced, the rest of the plugins will be removed).

Permalink structure bug fixed for new wordpress 2.8.x

Changed DB structure. YOU MUST RUN setup.php via your browser (ie.http://yourdomain/wpmanager/setup.php) to update it. Just enter your wpmdx admin area login user/pass and click the Upgrade DB Only Button.

./CHANGES.txt

./help/*. * - all files inside

./include/Admin.php

./include/version.php

./Templates/admin_batch_install.html

./Templates/admin_edit.html

./Templates/admin_list_all.html

./Templates/admin_list_all_pending_install.html

./setup.php

3.03 – 3.05

Added the following features and fixed some bugs:

1. You are now able to Upgrade plugins in a new section under Manage Plugins named Upgrade Plugins. You are also able to automatically have this setup with a cron job. Instructions on how to setup cron job is in the WP managerdx Instructions Guide. More information on how this section works is in the Admin Guide and in the section itself. Please read carefully so you fully understand how this works.

2. Added under Manage Content a new section where you can create meta elements profile named Manage Meta Profiles and be able to select the profile in Submit Articles section. You will need to upload all files within the /autoposter folder that is found in Manage Content Module zip archive.

Fixed some bugs when installing Multiple Blogs.

Changed DB structure. YOU MUST RUN setup.php via your browser (ie.http://yourdomain/wpmanager/setup.php) to update it. Just enter your wpmdx admin area login user/pass and click the Upgrade DB Only Button.

Upload the following files to replace the ones in your /wpmanager folder on your host.

. - indicates that you need to upload all files within that folder.

./help/*.*
./Templates/*.*
./include/*.*
./images/*.*
./tmp *.* -- this folder contains the newest version 2.8.5 of wordpress.
./admin.php
./setup.php
./CHANGES.txt
./cron.php
./index.php

3.06

While creating projects its now open in pop-up windows to avoid retyping all fields data if some error happens

Pending Project - redensing with needed columns and removed the mass update section

./include/Admin.php
./include/version.php
./templates/admin_batch_install.html
./templates/Header.html
./templates/admin_list_all_pending_install.html
./CHANGES.txt

3.07

Bug fixed in Manage Database also extra "Download DB and Templates button" button has been removed

While editing profile removed not needed extra buttons from bottom area.

```
./include/Admin.php
./include/Common.php
./include/version.php
/Templates/admin_backup.html
/Templates/admin_edit.html
/Templates/admin_profile_edit.html
./CHANGES.txt
```

3.08

Wordpress 2.9 compatibility added and Fixed some bug

```
./CHANGES.txt
./include/Admin.php
./include/pluggable_v2_8.php
./include/version.php
```

3.09

Show Password Encrypted (*****): Affects only cPanel Password and WP Admin Password. This refers to the fields that are in your wpmdx admin area > Single Install Blog, Multiple Install Blog and Add/List Profiles sections.

Bug fixed for first post permalink.

Bug fixed for permalink while wpmdx upgrades wordpress to latest version.

Bug fixed, now when you create new profile a default /%postname%/ permalink is there.

More support added for incompatible plugins and themes - when Uploading via its sections.

Themes section updated split into two options:

- Upload single selected theme only, not all themes, and delete other installed themes when updating. "Default" and "classic" WP themes are always present. (If you are Updating blog then it will only activate selected theme above BUT it will remove/delete the themes you already have activated within your wordpress blog)

- Upload single selected theme only, not all themes, and leave other installed themes when updating blog. (If you are Updating blog then it will only activate selected theme above BUT it will not remove the themes you already have activated within your wordpress blog)

Batch Install now supports per blog WordPress Username and Password (added in cvs format) You will find the new csv syntax example in wpmanager when you go in the Install Multiple Blogs section - just click the help link to your right. Also the new format can be found in the pdf admin guide.

typeset unix command replaced with export to support more unix paths

Changed DB structure. YOU MUST RUN setup.php via your browser (ie.http://yourdomain/wpmanager/setup.php) to update it. Just enter your wpmdx admin area login user/pass and click the Upgrade DB Only Button. Also for the password encryption to take effect you will need to choose yes or no. You can always go back and change this option anytime you like by running setup.php again. You can delete setup.php if you wish after you are done.

- ./include/Admin.php
- ./include/Common.php
- ./include/permalink-functions.php
- ./include/plugin-finder.php
- ./include/version.php
- ./Templates/admin_edit.html
- ./Templates/admin_batch_install.html
- ./Templates/admin_profile_edit.html
- ./Templates/admin_list_all.html
- ./help/*.*
- ./CHANGES.txt
- ./setup.php

3.10

Small bug fixed while restoring database inside manage database area

Few bugs fixed while updating themes/plugins for already installed blog for the first time

Bug fixed for permalink while wpmdx upgrades wordpress to latest version for already installed blog for the first time

More support added for incompatible plugins - when Uploading via its sections.

Split Install New Blog and Add Existing Blog into two separate sections.

While Updating Profile Data new pop-up window for verification of any errors

- ./include/Admin.php
- ./include/Common.php
- ./include/permalink-functions.php
- ./include/plugin-finder.php
- ./include/version.php
- ./Templates/Header.html
- ./Templates/admin_edit.html
- ./Templates/admin_edit_addblog.html
- ./Templates/admin_batch_install.html
- ./Templates/admin_profile_edit.html
- ./Templates/admin_menu.html
- ./CHANGES.txt

3.11

Added the ability to create a master profile blog with settings and plugins settings saved. Then be able to use that same blog profile to install new blogs. New menu options in Manage Profiles section.

Fixed some minor bugs like permalinks setup it was not saving correctly.
Change design in header and sections.

In List/Edit/Update Blogs > Update Multiple Blogs section – you can multi-update more settings aside from wordpress version, theme and plugins. To include; cpanel password, blog password, blogroll links, and more...

The following are the files that were modified that you need to upload and replace with the existing files in your wpmanagerdx folder:

. - means all files inside folder.

./help/*.*
./images/*.*
./include/*.*
./Templates/*.*
./CHANGES.txt
./setup.php
./admin.php
./cron.php

You will need to run setup.php, enter wpmdx user/pass and click Upgrade DB Only button. Then rename setup.php file.

3.12 Release Date: July 3, 2010. 2:00 PM

- Fixed some bug with the cron.php file. It wasn't upgrading plugins within blog that offer the Automatically Upgrade function.
- Added support for the new WordPress 3.0 version.
- Fixed some bugs when installing blogs corresponding to the permalinks when updating multiple blogs.
- Fixed some bug with Manage Databases
- Unix support fixed.

The following are the files that were modified that you need to upload and replace with the existing files in your wpmanagerdx folder:

. - means all files inside folder.

./help/*.*
./images/*.*
./include/*.*
./Templates/*.*
./CHANGES.txt
./cron.php
./setup.php

You will need to run setup.php via browser, enter wpmdx user/pass and click Upgrade DB Only button. Then rename setup.php file.

3.13 - 3.14 Release Date: 8/17/2010. Time: 1:00 P.M.

- Fixed some issues with Updating multiple blogs with wordpress version 3.0+.
- Fixed sorting of top labels in the List/Edit/Update Blog section.
- Added the ability to delete a profile in Manage Profiles > Option 1 along with the masterblog folder as well.
- Added the ability to go into an existing Profile > Option1 and Save as New (replicating that masterblog into a new profile name)
- Add Existing Blog(s) section with 2 options, one for adding one blog and option 2 for adding multiple blogs.

The following are the files that were modified that you need to upload and replace with the existing files in your wpmanagerdx folder:

. - means all files inside folder.

./help/*.*
./include/*.*
./Templates/*.*
./setup.php
./cron.php
./CHANGES.txt

You will need to run setup.php via browser, enter wpmdx user/pass and click Upgrade DB Only button. Then rename setup.php file.

3.15 Release Date: 9/14/2010. Time: 6:00 P.M.

- Added a CSV editor in Install Multiple Blogs > Option 1 and 2. Instead of creating a csv file with any external csv editor, you will be able to use the one here and easily enter the info for the domain and have the syntax format fill in the csv textbox for you.

The following are the files that were modified that you need to upload and replace with the existing files in your wpmanagerdx folder:

. - means all files inside folder.

./help/*.*
./include/*.*
./images/*.*
./Templates/*.*
./setup.php
./CHANGES.txt

You will need to run setup.php via browser, enter wpmdx user/pass and click Upgrade DB Only button. Then rename setup.php file.

3.16 to 4.0 Release Date: 2/01/11

1. compatibility with wordpress 3.0.x
2. permalink fixes
3. many changes in themes (admin area design fields etc.)
4. manage database area fixes
5. backup blogs area fixes
6. new themes and plugins included
7. new license and ioncube encryption – registration is required. You will need to register your copy of wpmdx php script with the email you login with in your member area. This is done when you upgrade your wpmdx version to 4.0 and run setup.php via your browser.
8. support to cpanel new theme
9. CVS Editor bug fixes for I.E 7 and 8

The following are the files that were modified that you need to upload and replace with the existing files in your wpmanagerdx folder:

. - means all files inside folder.

./backup/*.*
./help/*.*
./include/*.*
./images/*.*
./Templates/*.*
./tmp/*.*
./htaccess
./admin.php
./cron.php
./index.php
./setup.php
./testphp.php
./CHANGES.txt

You will need one of these for your host, choose the one you need and rename to ./ioncube:

./ioncube_32bit
./ioncube_64bit

Continue on next page.....

IMPORTANT!

You will need to run setup.php via browser, enter your wpmdx user/pass, click Upgrade DB Only button, click configure button at the end of page and register software with the email address you login with to your member area.

Final Step - rename setup.php file or remove from your host.

Version 4.01 – 2/24/2011 – 3:32 P.M.

1. compatibility with wordpress 3.1.x
2. cron.php bug fixes for compatibility with wordpress 3.1.x
3. Install Multiple Blogs small bug fixed

The following are the files that were modified that you need to upload and replace with the existing files in your wpmanagerdx folder:

. - means all files inside folder.

./include/*.*
./cron.php
./CHANGES.txt

IMPORTANT!

When updating a blog from an older version of WordPress to 3.10, you need to run Update twice so the permalinks get updated correctly.

Version 4.02 – 3/15/2011 – 1:20 P.M.

1. Fixed bug when upgrading the plugins in “Manage Plugins > Upgrade Plugins” section. It fixed the activating of the plugins.

The following are the files that were modified that you need to upload and replace with the existing files in your wpmanager folder:

./include/Admin.php
./include/version.php
./cron.php
./CHANGES.txt

Please note: If you are using the Windows version, then you only need to copy/paste the files above into the /setup-package/htdocs.
